

the BOX

Simple and Reliable Medication Adherence

The elderly demographic of those aged 65 and over accounts for between 25% to 30% of all prescriptions dispensed from a community pharmacy. Yet study after study has shown that many of these patients struggle to comply to their often complicated, multiple prescription regimens. This could result in negative health consequences such as:

- 20% of all non-elective admissions to hospitals
- 23% of all nursing home admissions

We believe that many of these situations related to the client's inability to manage their medications could be avoided with the provision of simple to use compliance aids.

Our most recent innovation, simply known as "the BOX" is a unique, easy to use automated medication reminder system to help ensure patients are taking their medications at the correct time, throughout the day. Designed to be used with multi-dose cellophane pouches, "the BOX" will accurately alarm and notify the patient that it's time to take their meds, ensuring that they adhere to proper medication intervals. With the multi-dose pouches making sure they are getting the right medications and "the BOX" notifying them that it is the right time to take their medications, prescription compliance should be significantly enhanced.

If you are providing multi-dose, cellophane strip packaging compliance packs to your customers, but are worried that they may not be taking them in a timely manner, "the BOX" may be the solution that you and your clients have been waiting for!

Advantages – a unique, easy to use automated medication reminder system

Offers the ability to set the alarm for up to four different times a day/night

Gives a clear sound and light signal when the alarm goes off

Has an interlock to store your medication safely
